A seller claim is a research question.

The packet identifies the offer, but supplies no controlled trial of the marketed Happy Paws finished chew.

OFFER FACTS

What is identifiable?

A captured $34.99 price, 100 chews and weight-based directions describe the offer.

Confirm the current label, selected purchase mode and final checkout total.

EVIDENCE LIMIT

What was actually tested?

The supplied doxycycline paper studies a different intervention in dogs with an infectious disease.

That paper does not test Immunity Dog Chews or establish a daily immune-support benefit.

DECISION GAP

What is still missing?

The complete quantitative formula and finished-product efficacy evidence are not supplied.

Seller statements, badges and a return policy cannot fill those evidence gaps.

No finished-product trial was supplied; do not infer an outcome.

Sources: Happy Paws product page and the source-linked Daily Intel article. No finished-product proof inferred.

One bottle. Different daily commitments.

Arithmetic from the captured $34.99 price, 100-chew count and seller directions. Not veterinary dosing advice.

DOG WEIGHT	CHEWS / DAY	DAYS / BOTTLE	COST / DAY
Under 10 lb	1	100	**$0.35**
10-30 lb	2	50	**$0.70**
31-60 lb	3	About 33	**$1.05**
61-90 lb	4	25	**$1.40**
Over 90 lb	5	20	**$1.75**

Before tax, shipping, discounts or price changes. Check the full label and current terms.

Source: Happy Paws page captured 29 OCT 2026. Daily cost = $34.99 / 100 x seller-directed daily chews.

Fill the gaps before deciding.

Keep the answer and its source together. A blank item is a question to resolve, not permission to assume.

- ☐ **Exact current quantitative formula**
- ☐ **Amount delivered per daily serving**
- ☐ **Finished-product study and limits**
- ☐ **Pregnancy or breeding caution**
- ☐ **Worsening symptoms and vet advice**
- ☐ **One-time or recurring selection**
- ☐ **Renewal and cancellation terms**
- ☐ **Refund eligibility and total costs**

Discuss individual suitability with a veterinarian; the page cannot decide it.
